## IF Directorate awards one-year agreement to Utica firm

*by Fran Crumb, Information Directorate*

ROME, N.Y. — The Air Force Research Laboratory has awarded a \$199,067 contract to Capraro Technologies Inc. of Utica, N.Y.

The one-year agreement, “GPS Environments EMI and Adaptive Processing,” is funded at congressional direction. “Capraro engineers will be studying the state of technology in the field of Electromagnetic Interference Mitigation,” said Jeffrey J.

Maier, program manager in the Sensors Directorate at AFRL’s Rome Research Site.

“They will trade space matrix with relevant technical examples, as well as a final integrated report to address mechanisms to reduce interference between commercial transmission in wideband frequencies and the Global Positioning Satellite system.” @
